CPTN 207
Lab Assignment 5
Alter Table
Drop Constraint

Using the scripts created in Lab #4 and the ER diagram from Lab #1, create a script named lab_5 to remove referential integrity and indexes by using the ALTER TABLE command. The result of this lab should be a script that can be run in the MySQL client.

ALTER TABLE tablename DROP FOREIGN KEY keyname_FK2;
ALTER TABLE tablename DROP INDEX keyname_FK2;
ALTER TABLE tablename DROP PRIMARY KEY;

Once the script has been tested and determined to be correct, submit the script to Canvas.
